WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

The broad low pressure trough still affecting Northern California will begin weakening today, and a high pressure ridge well off shore will gradually nose eastward during the week. Dry conditions will be in place all week except for a slight chance of some light showers near the Oregon border tonight and Tuesday. A steady warming trend is expected the rest of this week as the high gains influence over our weather pattern, and afternoon highs will reach near 100 again late this week in our warmest locations. A daily combination of gusty overnight N to NE winds with decreasing relative humidity (RH) recovery for the Sacramento Valley and adjacent foothills is the biggest fire weather concern developing this week. Gust speeds should mostly be 18-25 mph, but may locally reach 30 mph Tuesday night. RH recovery will be decreasing as the week progresses, so it will take a few nights to see poor to low-end moderate values (27-40%) develop. Afternoon RH's all week will also be decreasing with fairly widespread values of 8-15% expected later this week. The marine layer cloudiness will probably return somewhat, but the overnight N to NE winds seems likely to discourage their standard overnight formation at least somewhat if not outright in many coastal areas.

SOUTHERN CALIFORNIA

The marine layer will be between 3,000 and 4,000 feet deep through today, with morning low clouds and fog moving over the lower coastal mountain slopes. Minimum humidity will be mainly between 12% and 25% above and inland from the marine layer today. Temperatures will be 5 to 15 degrees below normal through today. Today maximum temperatures will warm to the mid 60s to mid 70s across the mountains and upper 70s and 80s in the valleys. A significant warming trend along with minimum humidity mainly in the teens will affect the region Tuesday through next weekend as high pressure moves over the West Coast from the Pacific Ocean. The marine layer will become fairly shallow by Thursday, with morning low clouds and fog moving only over the coastal areas.
